Family Assistance Administration
January 1981

Aid to Families with Dependent Children (AFDC) provides financial assistance to children deprived of support or care due to death, divorce, absence, or disability of one or both parents. It also provides for rehabilitation and job placement for children and parents through the Work Incentive Program (WIN) and referral to Vocational Rehabilitation or to Job Services, and for children and/or family services.

Arizona Economic Outlook for 1981 - 1982

Economic instability dominated the national news during most of 1980. Though the effects of the recession were felt statewide, the impact was less severe in Arizona than in the nation as a whole. The U.S. economy hovered between recession and stagnation, while the Arizona economy expanded slowly. Previous strength in the state's economy provided a foundation for withstanding the national economic downturn of 1980.

Arizona employment in manufacturing, services and government grew despite the nationwide economic slowdown. Trade, Finance, Insurance and Real Estate, and Transportation, Communications, and Public Utilities, managed to hold their own. The mining industry was hurt by a lengthy copper strike while the construction industry was the only Arizona sector of the economy that suffered major employment losses during 1980.

Both mining and construction may be in for tough times during early 1981. The mining industry suffered through a five month strike in 1980 that idled over 15,000 copper workers at its peak. Despite the length of the strike and the accompanying slowdown in production, demand for copper remains low. After reaching a price per pound of \$1.33 early in 1980, copper prices fell sharply throughout the latter part of the year. At year's end copper was selling for less than 90¢ per pound.

The mining industry was in part a victim of the national recession. Two key markets for copper producers are the automobile and construction industries. Both of these industries had a bad year in 1980, thus reducing the demand for copper. Despite the lengthy halt in production, demand for copper remained

low. Unfortunately neither of these two industries shows signs of revival and this could mean more trouble for the Arizona mining industry. Already faced with higher costs resulting from a strike settlement and reduced demand for their product, Arizona mine operations may be forced to layoff some of their employees if circumstances do not improve by the second quarter of 1981.

The construction industry faces similar problems. Hard hit by the 1980 recession, Arizona construction employment fell sharply during the first two quarters of 1980. A mild recovery got under way during the third quarter as interest rates fell to more tolerable levels. Unfortunately the lower interest rates did not last for long. When higher rates returned during the end of the year, the industry again suffered. With the outlook for continued high interest into 1981, the prospects for the construction industry are not good in the short run. On a long term basis the industry should again prosper. Heavy construction has managed to hold its own during the recession and residential construction should begin to revive by the 4th quarter of 1981. Arizona will continue to grow rapidly during the 1980's, and as the population increases, the construction industry will prosper. Though the growth expected in the 1980's may not equal that of the 1970's it will none-the-less be substantial and the construction industry will benefit. When the industry does recover, occupations in demand will include carpenters, electricians and heavy equipment operators.

Also hurt by the economic downturn has been retail trade. Though industry employment has nearly managed to hold its own throughout 1980, continued high interest rates and economic stagnation may mean a rough first half of 1981. Layoffs are a possibility during the first two quarters of 1981 but the expected resurgence of the economy during late 1981 or early 1982 should

improve the industry's outlook. If public confidence in the economy increases, consumer spending should follow suit. When the improvement occurs, employers will be hiring cashiers, sales people, stock workers and restaurant help.

Fortunately for Arizona, the economic news has not all been bad. The manufacturing industry, in particular electronics, performed quite well in 1980. Rapid expansion occurred in the electronics industry during the past four quarters and is expected to continue. Skilled technical people will be in high demand with many openings expected for electrical and electronic assemblers and engineers. With the incoming Reagan administration's commitment to increases in defense spending, Arizona's defense contractors should do well during the next four years. The largest number of manufacturing openings will be in maintenance and production occupations and much of the employment opportunity will be in Maricopa and Pima counties.

Services displayed sluggish growth in 1980 and the trend is expected to slowly improve. Arizona will attract working families, retirees and tourists. The expected improvement in the state's economy is predicted to begin during the latter part of 1981 and should be led by an increase in population growth. Service related employment linked to population growth should increase and employment linked to tourism will follow the same pattern. Secretaries, clerks and receptionists will be in demand as will occupations that are related to the medical field. Increased tourism will result in Arizona hotels and motels adding to their staffs. This will especially be true in Phoenix and Tucson where the bulk of the tourism trade occurs during the winter season. Other parts of Arizona that are dependent on summer tourists may not see a recovery until 1982.

Maricopa County

Despite the poor national economy, Arizona fared surprisingly well in 1980 and Maricopa County did even better. Manufacturing and government performed admirably. FIRE gained during the year and most other sectors of the economy held their own. Only the construction industry was plagued by massive employment losses. Retail trade had a poor year but widespread layoffs did not materialize.

The short term outlook is mixed. Manufacturing should continue to do well with the electronics industry leading the way. Increased defense spending could lead directly to additional employment at valley electronics firms. The majority of Arizona's manufacturing employment is in Maricopa County and the likelihood is that the industry will again be a key to the county's prosperity in 1981 - 82. Electrical and electronic assemblers and engineers should be in demand.

Construction and retail trade may not fare well in the short term but are likely to improve by the end of 1981. Continued high interest rates will keep construction employment at low levels during most of 1981, but a recovery is expected after that. Carpenters, electricians and heavy equipment operators will be in demand when that recovery occurs.

Retail trade in Maricopa County had a rough year in 1980, but should recover after the second quarter of 1981. Look for improvement in the national economy to influence consumer confidence and thus spur more purchasing and traveling. Tourism may not recover fully until the winter of 1981 - 82. When recovery occurs in the retail trade industry, employment opportunities will be for sales clerks, cashiers, stock workers and restaurant help.

Other sectors of the local economy are expected to hold their own and overall, Maricopa County employment should grow substantially during the 1980's but not as rapidly as during the 1970's.

Pima County

In 1980 the Arizona economy performed better than the national economy and Maricopa County did better than Arizona. At the same time, Pima County did better yet. Spurred by an increasingly strong manufacturing sector, Pima County's economy grew during 1980 and is expected to continue growing rapidly during the rest of the 1980's. Led by the electronics industry, Pima County manufacturing will provide numerous employment opportunities for electrical and electronic assemblers and engineers. New firms are expected to continue expanding and additional related business will move to the area. Most of the opportunities in this field will be in the Tucson area.

Outside of Tucson, mining will continue to be a major employer in the coming years. The short term forecast for the mining industry is, however, a mixed bag. Employment has risen to 1980 pre-strike levels, but a lack of demand and increased labor costs may force mine operators to layoff employees by mid-1981. The copper industry is not likely to fare well until the national construction and automobile industries recover from their current problems. Unfortunately recovery in both industries may not occur for some time. New job opportunities in the mining industry will be few and far between.

Construction in Pima County has suffered as elsewhere in Arizona and continued high interest rates will interfere with the predicted boom in the industry.

But lower interest rates will come, and probably by late 1981 construction will pick up. Look for job opportunities for carpenters, electricians and heavy equipment operators to increase substantially in 1982.

Retail trade may stagnate during the first half of 1981 but by the end of the year, it should begin to revitalize and 1982 should be a good year. Job opportunities will occur for sales clerks, cashiers and stock people. Elsewhere in the trade industry, restaurant employment should increase substantially beginning in the 1981 - 82 winter season. Openings will be available for waiters, waitresses, cooks and other restaurant positions.

Other Pima County industries are expected to show little improvement until the third quarter of 1981. Look for falling interest rates, improvement in the national economy and increased in migration to precede growth in services, FIRE, TPCU and government.

Balance of Arizona

Urban Arizona fared better than the nation in 1980, but the balance of the state was not as lucky. Unemployment rates were high and the prospect is that they will remain high into the foreseeable future. A lengthy copper strike idled thousands of rural county workers for several months in 1980 and cost local economies millions of dollars. Retail trade was hard hit by the strike as local merchants lost a valuable market for their goods. In many of Arizona's rural counties, mining is a key industry and the vitality of other industries is linked to the health of the copper industry. Unfortunately the

future of the copper industry is clouded. The strike has been settled but the settlements have increased mine operator's costs and at the same time the demand for copper has been low. Copper is sold in large quantities to the automobile and construction industries, and until they recover from current problems, demand for Arizona copper is likely to remain low. The price of copper plummeted during 1980 and shows little sign of quick recovery. Should the price fall further and should demand remain low, expect copper mining companies to begin layoffs by the summer of 1981. If large scale layoffs occur, other industries will feel the pinch. Among the first will be retail trade and services. Residential construction has already been hurt by high interest rates and is not expected to recover for some time. Heavy construction may fare better because of large but isolated projects. These heavy construction projects would include highway repairs, power plant construction and installation of the Central Arizona Project.

District III

During 1980, District III suffered through some rough times. Unemployment in some cases was twice the state's average and key industries suffered through some trying times. Tourism is important to this part of the state and while it did not do well in 1980, the future may be brighter. If the national economy begins to recover during the spring of 1981, look for tourist-related employment to show signs of revival during the summer. If the national economic recovery does not occur until summer, tourism may not improve dramatically until mid-1982. When industry recovery does occur, look for job openings in the following hotel-motel related occupations; restaurant

positions, cashiers, sales and stock jobs. An unpredictable factor influencing tourism in District III will be the cost of gasoline. If prices remain stable, recovery could occur sooner than expected. If the price of gasoline rises dramatically, industry recovery could be delayed as potential tourists postpone lengthy and expensive automobile vacations.

Other sectors of the economy will be affected by tourism. Should improvement occur by summer of 1981, look for services to follow suit. Meanwhile, government employment could be stepped up shortly after improvement is apparent nationally.

Construction employment opportunities will be spotty. Heavy construction jobs may be available in selected areas where major projects such as the Springerville power plant are planned. But residential construction will not improve appreciably until interest rates fall, the national economy strengthens and migration to Arizona increases.

District IV

The economic picture was mixed in 1980 for District IV. Yuma County suffered high unemployment rates and job losses in trade, manufacturing and construction. Mohave County did better. Their unemployment rates were close to the statewide average and were much lower than most of the other counties in the balance of state. Trade and government did well in 1980 despite national and statewide trends to the contrary. Most other Mohave County industries held their own and only construction suffered significant job losses during the year.

District IV should show marked economic improvement by summer of 1981. Heavy construction employment is likely to improve with job opportunities becoming available on the Central Arizona Project along the Colorado River. Tourism may improve by summer 1981 and this will help employment in hotels and motels and restaurants. Related businesses will follow and service employment should improve shortly thereafter. Stable gasoline prices would benefit the area and conversely, dramatic fuel price increases could stymie the expected economic improvement in the area as travelers cut short on costly automobile trips.

Overall the future prospects for the area are good. Tourism, manufacturing and proximity to the Central Arizona Project will all be beneficial. The area will be further helped by continued development of agriculture along the river.

District V

Copper mining is the primary industry in District V and the lengthy 1980 strike had a severe impact on many communities in this area. Fortunately no further strike actions are likely until 1983 when the new copper contracts expire. Other factors may however hurt mining in Pinal and Gila counties. Demand for copper is low because key users of the metal are faring poorly right now. Until the automobile and construction industries improve nationally, demand for copper is likely to remain low. This results in low prices for the metal and leads to the possibility of mining and smelting layoffs. The combination of lower prices, higher costs and diminished product demand may lead to employment reductions by mid-1981. Should this occur, other industries in the area will be affected. Trade and services will be among the first to feel the squeeze.

District VI

This area was plagued with moderate to high unemployment in 1980 as local economies stalled under the stress of recession. Greenlee County had a low employment rate, but lost over 50% of its wage and salary employment during the summer months as a result of the copper strike. Millions of dollars in spendable income were lost and area merchants had to suffer through a difficult three months. Other District VI counties did not have the trauma of a strike, but did fail to show any significant economic gains during 1980.

Future prospects may brighten as Tucson expands southward toward Cochise and Santa Cruz counties and manufacturing increases in importance near Fort Huachuca. Expect improvement in trade and services to occur by mid-1981 if gas prices remain stable allowing more people to take automobile trips.
